DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-2, 4-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Abe et al. (WO 2004/012295 or US 2005/0250007).

Abe et al. ('0007) teaches on page 1, [0002-0005], a battery comprising a positive electrode of LiCoO₂, LiMn₂O₄ or LiNiO₂, a negative electrode comprising graphite having a lattice spacing (d₀₀₂) of 0.335 to 0.340 nm and an electrolyte. Abe et al. ('007) teaches on page 1, [0016], that the non-aqueous solvents can be cyclic carbonates such as PC, EC, VC, etc; lactones such as gamma-butyrolactone, linear carbonates such as methyl ethyl carbonate, dimethyl carbonate, diethyl carbonate, etc.; esters such as dimethyl oxalate and compounds containing S=O group such as 1,3, propanesultone, etc. Abe et al. teaches on page 2, [0024], that the battery exhibits 4.3 V.

Abe et al. discloses the claimed invention except for specifically teaching that the electrolyte solution comprises dialkyl oxalate and further comprising vinylene carbonate and/or 1,3-propanesultone.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use both solvents, dimethyl oxalate and further vinylene

carbonate and/or 1,3-propanesultone in the electrolyte taught by Abe et al. because it is prima facie obvious to combine two compositions each of which is taught by prior art to be useful for the same purpose in order to form a third composition that is to be used for the very same purpose. See *In re Kerkhoven*, 205 USPQ 1069; *In re Susi*, 169 USPQ 423.

Abe et al. discloses the claimed invention except for specifically teaching that the electrolyte solution comprises dialkyl oxalate and further comprising vinylene carbonate and/or 1,3-propanesultone and further comprising a cyclic carbonate such as propylene carbonate or ethylene carbonate with a linear carbonate such as methyl ethyl carbonate, dimethyl carbonate or diethyl carbonate or a combination of a cyclic carbonate such as EC or PC with a lactone such as gamma butyrolactone.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use multiple solvents, dimethyl oxalate, vinylene carbonate and/or 1,3-propanesultone and further comprising a cyclic carbonate such as propylene carbonate or ethylene carbonate with a linear carbonate such as methyl ethyl carbonate, dimethyl carbonate or diethyl carbonate or a combination of a cyclic carbonate such as EC or PC with a lactone such as gamma butyrolactone in the electrolyte taught by Abe et al. because it is prima facie obvious to combine two compositions each of which is taught by prior art to be useful for the same purpose in order to form a third composition that is to be used for the very same purpose. See *In re Kerkhoven*, 205 USPQ 1069; *In re Susi*, 169 USPQ 423.

Allowable Subject Matter

3. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
